Daily Stand Up Log

Sprint 1

- 10 am Saturday
    - We will work on implementing the first 4 user stories with the usage of AI models, specifically Gemini 2.5 Pro, as well as GPT 4.1 through GitHub Copilot. We will also develop test cases to test those same features. (The features being developed are recorded in the Sprint planning document.)

Sprint 2

- 9 am Sunday
    - Running the test cases and doing more manual testing, all of the previous features built in Sprint 1 function as intended.
    - We will work on implementing the next sprint, Matching and Scheduling Users, with user stories and AI models, specifically Gemini 2.5 Pro, as well as GPT 4.1 through GitHub Copilot. We will also develop test cases to test those same features. (The features being developed are recorded in the Sprint planning document.)

Sprint 3

- 11 am Sunday
    - Running the test cases and doing more manual testing, all of the previous features built in Sprint 2 function as intended.
    - Blockers from the previous sprint, some "back" buttons are missing; these will be added along with all of the UI changes.
    - We will work on implementing the next sprint, UI/UX Refinement & Advanced Features, with user stories and AI models, specifically Gemini 2.5 Pro, as well as GPT 4.1 through GitHub Copilot. We will also develop test cases to test those same features. (The features being developed are recorded in the Sprint planning document).
